

Nokia N95

Generally accepted as being the most advanced mobile phone currently available, Nokia have packed an inventory of technology into an impressively compact device. The built in 5 Mega Pixel camera features Carl Zeiss Optics with auto focus and digital zoom, with one of the best quality video capture options available on a mobile phone.

Getting lost is fast becoming a thing of the past with the built in 'Maps' application which affectively turns the N95 into a fully functioning GPS Sat Nav device accurate to 10m depending on connectivity.

Thanks to the built in TV Out, Stereo Speaker, 3.5mm Audio Jack, and Micro SD card slot, there are few restrictions left to limit the MP3, AAC, AAC+ and WMA music player, with supported video playback including 3GP, Real Video and MP4.

Business users will no doubt take interest at the S60 3rd Edition (Symbian 9.2) Operating System similar to that used in other Smart Phones in the corporate market such as the E50, E61i, E65, N76 and N93i making for seamless and, more importantly, fast operation of office applications.

Unfortunately, even great phones have their drawbacks, and with the N95, it's the battery life that may be open to criticism. Heavy users of the media player, camera, and GPS will find themselves recharging the N95 on a daily basis, so it may be prudent to purchase a spare Nokia BL-5F battery if regular recharging presents a problem

General Network HSDPA / GSM 850 / 900 / 1800 / 1900

Announced 2006, September

Status Available

Size Dimensions 99 x 53 x 21 mm, 90 cc

Weight 120 g

Display Type TFT, 16M colors

Size 240 x 320 pixels, 40 x 53 mm
